# ROYAL 1B (BASIC) (AWS:SFA 5.4, E 347 -

## Applications

AISI steels 321 and 347 generally on 18/8 steels stabilized by Titanium or Niobium in the manufacture of equipment for chemical, food & aircraft industries, also used for welding unstabilized stainless steels of AISI 301, 302, 304 & 308 types.

### **Characteristics on Usage**

A medium heavy coated basic type all position electrode which is almost spatter free, has a smooth arc, with excellent weld bead finish and self lifting slag. A niobium stabilised stainless steel of 19 Cr - 10 Ni type weld metal has excellent creep strength and is of radiographic quality. Welding can be done on DC(+) polirity, high degree of corrosion resistance in oxidising environment such as nitric acid.

# Notes On Usage

1) Dry the electrode at 350°C for 60 Min- before use .

(12) Keep the arc as short as possible.

(73) Remove rust, water, oiland paint from the surface to be welded.
